Problem statement : IoT Based Industry-Specific intelligent firemanagement system

Domain : Internet of Things

Assignment 2: Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

By,

Kaipu Brahma Reddy -720819106046

Python code:

```python
import random
temp=random.randint(1,100)
humid=random.randint(1,100
) print(temp)
```

```python
print(humid)
if(temp>30 & humid<50):
print("Alarm detected")
elif(temp>30 & humid>50):
print("Alarm detected")
elif(temp<30 & humid<50):
print("Alarm not detected")
elif(temp<30 & humid>50):
print("Alaram not detected")
```

OUTPUT:

   i) 30
      19
      Alarm not detected.

   ii) 57
      97
      Alarm detected.

main.py

```python
import random
temp=random.randint(1,100)
humid=random.randint(1,100)
print(temp)
print(humid)
if(temp>30 & humid<50):
    print("Alarm detected")
elif(temp>30 & humid>50):
    print("Alarm detected")
elif(temp<30 & humid<50):
    print("Alarm not detected")
elif(temp<30 & humid>50):
    print("Alaram not detected")
```

input

```
19
30
Alarm not detected

...Program finished with exit code 0
Press ENTER to exit console.
```

main.py

```python
import random
temp=random.randint(1,100)
humid=random.randint(1,100)
print(temp)
print(humid)
if(temp>30 & humid<50):
    print("Alarm detected")
elif(temp>30 & humid>50):
    print("Alarm detected")
elif(temp<30 & humid<50):
    print("Alarm not detected")
elif(temp<30 & humid>50):
    print("Alaram not detected")
```

input

```
57
97
Alarm detected

...Program finished with exit code 0
Press ENTER to exit console.
