Problem statement : IoT Based Industry-Specific intelligent firemanagement system

Domain : Internet of Things

Assignment 2: Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

By,

Kalamshetty Revanth -720819106048

Python code:

```python
import random

temp=random.randint(1,100)

humid=random.randint(1,100
) print(temp)
```

```python
print(humid)
if(temp>30 & humid<50):

    print("Alarm detected")

elif(temp>30 & humid>50):

    print("Alarm detected")

elif(temp<30 & humid<50):

    print("Alarm not detected")

elif(temp<30 & humid>50):

    print("Alaram not detected")
```

OUTPUT:

   i) 30

      19

      Alarm not detected.

   ii) 57

      97

      Alarm detected.

```python
import random
temp=random.randint(1,100)
humid=random.randint(1,100)
print(temp)
print(humid)
if(temp>30 & humid<50):
    print("Alarm detected")
elif(temp>30 & humid>50):
    print("Alarm detected")
elif(temp<30 & humid<50):
    print("Alarm not detected")
elif(temp<30 & humid>50):
    print("Alaram not detected")
```

```
19
30
Alarm not detected

...Program finished with exit code 0
Press ENTER to exit console.
```

```python
import random
temp=random.randint(1,100)
humid=random.randint(1,100)
print(temp)
print(humid)
if(temp>30 & humid<50):
    print("Alarm detected")
elif(temp>30 & humid>50):
    print("Alarm detected")
elif(temp<30 & humid<50):
    print("Alarm not detected")
elif(temp<30 & humid>50):
    print("Alaram not detected")
```

```
57
97
Alarm detected

...Program finished with exit code 0
Press ENTER to exit console.
```
